1. Introduction

A data dictionary is a collection of metadata such as object name, data type, size, classification, and relationships with other data assets. It is used by data administrators, analysts, and engineers to understand and trust data assets. It helps in the creation of authentic, transparent, and consistent data throughout the organization.

In this data dictionary, following models are chosen for documentation:
MongoDB 8.0 (MongoDB)

For each model, definitions of tables (entities/collections), views, functions are listed in order. Detailed properties of data elements (data type, size, nullability, optionality, indexes, foreign keys, constraints) are organized in tabular format.

2. Model: MongoDB 8.0 (MongoDB)

Version: 8.0

1 database is listed below.

2.1. Database: default

Database objects to be listed: 3 collections

2.1.1. Collections

2.1.1.1. Collection: Inventario_Activos

Fields

Pos	Name	Type	Required	Others
1	_id id de indentificacion	objectId	✓	
2	numero_serie numero del activo	string	✓	
3	estado_fisico estado en el que se encuentra	string	✓	
4	datos_catalogo datos del catalogo	object	✓	
5	datos_auditoria datos de la auditoria	object	✓	

2.1.1.2. Collection: Ordenes_Compra

Fields

Pos	Name	Type	Required	Others
1	_id indetificacion	objectId	✓	
2	folio_orden folio de la orden de compra	string	✓	
3	estado_orden estado de orden	string	✓	

4	monto_total_estimated monto estimado	double	✓	
5	proveedor_asignado	string	✓	
6	articulos_solicitados	array (object)	✓	
7	datos_auditoria	object	✓	

2.1.1.3. Collection: Transaciones financieras

Fields

Pos	Name	Type	Required	Others
1	_id	objectId	✓	
2	folio_operacion	string	✓	
3	tipo_movimiento	string	✓	
4	monto	double	✓	
5	entidad_fiscal_snapshot	object	✓	
6	datos_auditoria	object	✓
